Levels of evidence were assigned based on the Oxford Centre for Evidence-based Medicine (OCEBM) Levels of Evidence 2011. Studies about resource use, costs, or cost-effectiveness were assigned same levels of evidence as a question of “prognosis” as they determine consequences of disease or treatment, and since no levels of evidence exist for health economic evaluation questions/studies.

* Levels of evidence were assigned based on the Oxford Centre for Evidence-based Medicine (OCEBM) Levels of Evidence 2011. Studies about resource use, costs, or cost-effectiveness were assigned same levels of evidence as a question of “prognosis” as they determine consequences of disease or treatment, and since no levels of evidence exist for health economic evaluation questions/studies.

** NA: Not available, as no levels of evidence exist for qualitative research studies.
